Sally C. Fryar, Kevin D. Hyde, David E.A. Catcheside. A checklist of marine fungi from Australia. 14 p.

Abstract—A checklist of non-lichenized marine fungi in Australia is presented. From 1954 to 2020 a total of 121 species in 93 genera were observed. Most species were ascomycetes, with only three basidiomycetes. Of these ascomycetes, most were seen in their sexual state (93 species) compared with their asexual state (21 species).

Key words—biodiversity, fungal diversity
